

# Ag Leader® Technology

AVAILABLE FEBRUARY 2010

## INTEGRA

The new INTEGRA display is the full-featured, year-round hub of any precision farming operation. A large, full-color 12.1" HD touchscreen display is easy to read and offers powerful, year-round precision farming tools.

Mapping, planter and application control, yield monitoring, real-time data logging and more - can all be controlled from cab using the INTEGRA display.

The display also features four video camera inputs, providing operators a better view of equipment operation and safety by allowing them to view live video on the display.

Bottom Line: The INTEGRA display can help to reduce input costs and increase yield potential.

Part #	Description	Price
INTEGRA	Integra	\$9,500.00

## EDGE

The EDGE display offers an entry-level, year-round precision farming solution. It's specifically designed for those just getting started with precision technology, but includes features like AutoSwath.

The EDGE display's ability to perform guidance and automated steering control makes it a smart investment for those looking for the flexibility of a more full featured precision/guidance system.

It is a great investment for experienced precision farming operators who need displays for additional vehicles or just want an easy-to-use input cost saving solution.

Part #	Description	Price
4100228	Edge	\$4,390.00

## L160 EXTERNAL LIGHTBAR

The L160 CAN bus Lightbar features an easy-to-read display and configurable LED spacing. A companion guidance system to either the EDGE or INTEGRA display, its compact design makes it the ideal guidance tool for dash or windshield mounting, providing the operator with an easy view.

- Choose between "chase" or "pull" LED modes.
- Adjustable brightness is ideal for daylight or night use.
- Displays cross track error, pass number and degree heading

Part #	Description	Price
L160	L160 External Lightbar	\$790.00

## INSIGHT - THE COMPLETE PRECISION SOLUTION

Engineered from the ground up to take advantage of emerging advances in precision farming, INSIGHT features a 10.4" color touch-screen display, allowing users to view on-the-go information in color as they move through the field.

The large color display allows users to view yield maps, variable rate application maps, as-planted hybrid/variety maps and other real time field maps at the same time they are performing field work. This allows growers to observe field conditions that cause yield differences.

The INSIGHT display has a rugged sealed enclosure to keep out the elements and has an internal memory for storage of color maps. Adjustable backlighting on the display makes it easy to view the monitor in bright sunlight or at night. Direct access keys provide one-touch access to Home, Setup, Summary/Report and Run screens. Great attention has been focused on ensuring data integrity in all operating conditions, because accurate and reliable data collection is the foundation of precision farming.

Part #	Description	Price
4100200	Insight Package	\$7,990.00
