Kit for Centerline

Pt# 90-02287
List Price \$ 3733.00

Also Available with RX400P receiver for Omnistar, beacon & WAAS.

TeeJet Swath Manager 5

Automatic Boom Section Control for Centerline & Swath XL Light Bars

Swath Manager Automatic Boom Section Control
Add the Swath Manager 5 to your CenterLine lightbar and get automatic boom section control of up to five boom sections. The CenterLine and Swath Manager 5 store information about where you have sprayed. When you overlap these areas, the corresponding boom sections are switched off. The Swath Manager can interface to your existing spray rate controller to ensure accurate application rates and area accumulation.

Tilt Correction Module

If your GPS antenna is mounted 12 feet (4 meters) above the ground, a 10% side slope can cause 2 feet (.6m) of position error. The new Mid-Tech Tilt Correction Module corrects GPS position errors caused by side-slope conditions. Mounted to a solid structure on your vehicle, the Tilt Correction Module will intercept GPS signals from your receiver and provide corrected position data to your guidance device.

- Diagnostic LEDs indicate status of TCM (Power status, operating status, and status of incoming GPS data)
- Weatherproof electrical connector for trouble-free operation
- Mounting holes built into housing
- Automatically detects GPS sensor baud rate and adjusts output accordingly
- Compatible with Swath XL, Guideline and CenterLine guidance systems
