

The EZ-Guide[®] Plus LCD Screen

The EZ-Guide Plus system is the first to combine crystal clear guidance LED's, a sunlight readable graphical LCD screen, and integrated GPS into one complete guidance package. The addition of the LCD screen adds many useful features to an already solid product. Setup is hassle free on the screen of the EZ-Guide Plus. The LCD screen displays a map showing where you are, versus where you need to be, while simultaneously displaying two text user-selectable options such as: offline distance, swath #, speed, field area, satellites, heading and more. The status screen can display four text options at once while you continue to use the light bar for guidance. The guidance screen can be switched between an "overhead" and "perspective" view. You can also zoom in or out on the vehicle's current position while performing guidance. To increase visibility during the day and night, the display has both contrast and brightness adjustments. To give you a sense of perspective and speed, you can also activate progress lines on the screen. You can also show adjacent swaths, field boundaries and A-B lines. With the addition of the LCD screen, navigating back to where you paused guidance is even easier.

Simplicity & Reliability The EZ-Guide Plus system provides precise, reliable guidance for a variety of farming operations. EZ-Guide Plus can help reduce costs and maximize productivity. Affordable and easy-to-use, EZ-Guide Plus is an investment that starts paying for itself from day one.

The EZ-Guide system lets you apply material right the first time, helping to eliminate skips and overlaps. An end zone warning on the screen and audible alarm (optional) warn you when approaching field edges, allowing you to precisely control how and where to apply. EZ-Guide also supports odd-shaped fields by allowing you to define a custom headland and then perform guidance within it.

With GPS guidance, you can extend operating hours to work when you need to, even in nighttime, fog, or dust. And guidance with a lightbar reduces driver fatigue, increasing the overall safety of your operation.

EZ-Guide Plus supports free WAAS differential correction covering the USA and parts of Canada.

Rugged The rugged design safeguards your investment because it is built with hardware that lasts. It is built for use in tractors, sprayers and combines. The EZ-Guide Plus comes with a two-year warranty.

Standard Systems

Part# AGL-EZGP-KP with handheld keypad

List Price \$ 6279.00

Part# AGL-EZGP no handheld remote

List Price \$ 5870.00
